Follow-Up — Collaboration Discussion

Prepared for: Drew Harris, Founder — Expert Scale (Apex Replicant™)

Prepared by: Muhammad Atif — Overtone

Date: 21 August 2026

Classification: Confidential

Dear Drew,

Thank you for the time today and for walking through how Protégé decides when to escalate. Your framing — refuse when out of specialty, dig deeper when on-scope but thin, then hand off to the human expert — is the standard we want the live meeting layer to respect.

You noted that Protégé today operates through a web interface, and that live meeting join is the missing piece. That is precisely the path Overtone has been building: a participant bot in Meet / Zoom / Teams, grounded answers from indexed session sources, and a clear stop when the source cannot support a reply.

As discussed, we are treating next steps as a **collaboration partnership** — integrate and prove fit — not a commercial close or capital conversation at this stage.

Enclosed

- **Document 02** — Collaboration Spike Outline (scope, success criteria, next steps)
- **Document 03** — Architecture Overview (join path, grounding, stack)

Requested of you

- Review the spike outline at your convenience
- Optionally try Launch on the dashboard with your own Google Meet link
- If useful, schedule a short working session to align escalate-stub fields with your handoff model

Dashboard (Launch): <https://overtone-dashboard-4idrhaaffca-uc.a.run.app>

Please note: realtime latency is still being optimized (~3–4 seconds in places). Honest feedback after a self-test is welcome.

I look forward to your thoughts.

Respectfully,

Muhammad Atif

Overtone
