

OVERTONE

Expert Scale × Overtone — technical collaboration proposal

Collaboration Spike Outline

To: Drew Harris — Expert Scale / Apex Replicant™

From: Muhammad Atif — Overtone

Date: August 2026

Status: Proposal only — no commercial commitment

1. Purpose

On our discussion you confirmed that Protégé runs primarily through a web interface today, and that **live meeting join** is the missing capability. Overtone already joins Meet / Zoom / Teams as a participant and answers from an indexed deck or session source.

Escalation model (as you described)

- **Out of specialty** → refuse / out of scope
- **On-scope but thin** → dig knowledge base deeper → escalate if still insufficient
- **Lead-gen / limited capacity** → escalate serious asks and time commitments to the human expert

This spike wires **(A) your judgment ladder** into **(B) our live join path** once, end-to-end.

2. Goal (2–3 weeks, light)

*Bot joins a live meeting → answers only when grounded in session sources → otherwise abstains or flags **needs expert** the way your escalate loop does.*

This is a **collaboration proof**, not a product sale and not an investment discussion. Commercial shape is deferred until after one clean end-to-end run.

3. Scope

In scope

#	Deliverable
1	Meet join (Recall) + realtime voice + deck/session grounding (existing Overtone path)
2	Escalation mapping stub: out-of-scope refuse / on-scope dig / escalate-if-thin → log needs expert
3	Short write-up: what worked, latency notes, what would plug into Apex / Protégé APIs

Out of scope for this spike

- Full Apex / Protégé product integration or production SLA
- Pricing, equity, exclusivity, or fundraising
- Rebuilding your judgment layer from scratch

4. Success criteria

- In a live Meet, a **grounded** question receives a source-bound answer (deck / session).
- An **out-of-scope** or **ungroundable** question refuses or escalates — no invented answer.
- Escalations are visible (log / flag: topic, reason, timestamp) for a human expert to treat as ground truth later.

5. Contribution model

Expert Scale	Overtone
Escalation rules + when “needs expert” is correct	Meet / Zoom / Teams join + presenter AV + voice relay
Optional sample specialty scope (e.g. GTM-only) for the test	Indexed deck / session grounding + tool calls
One short review call after you try Launch	Spike build + honest latency / failure notes

6. Suggested next steps

- You try **Launch** on the dashboard with your own Meet link (feedback welcome).
- We lock a **30-minute working session** to align escalate-stub fields with your handoff today.
- After one clean end-to-end run → decide commercial shape (integration / ongoing collab) — or stop cleanly.
