

Collaboration Spike Outline

Expert Scale × Overtone — Technical Collaboration Proposal

Prepared for: Drew Harris, Founder - Expert Scale (Apex Replicant™)

Prepared by: Muhammad Atif, Founder - Visions Craft (Overtone)

Date: August 2026

Status: Proposal only - no commercial commitment

1. Purpose

On our discussion you confirmed that Protégé runs primarily through a web interface today, and that live meeting join is the missing capability. Overtone already joins Meet, Zoom, and Teams as a participant and answers from an indexed deck or session source.

Escalation model (as you described)

- **Out of specialty** — refuse / out of scope
- **On-scope but thin** — dig knowledge base deeper, then escalate if still insufficient
- **Lead-gen / limited capacity** — escalate serious asks and time commitments to the human expert

This spike wires **(A) your judgment ladder** into **(B) our live join path** once, end-to-end.

2. Goal (2–3 weeks, light)

Bot joins a live meeting → answers only when grounded in session sources → otherwise abstains or flags “needs expert” the way your escalate loop does.

This is a **collaboration proof**, not a product sale and not an investment discussion. Commercial shape is deferred until after one clean end-to-end run.

3. Scope

In scope

#	Deliverable
1	Meet join (Recall) + realtime voice + deck/session grounding (existing Overtone path)
2	Escalation mapping stub: out-of-scope refuse / on-scope dig / escalate-if-thin → log needs expert
3	Short write-up: what worked, latency notes, and what would plug into Apex / Protégé APIs

Out of scope for this spike

- Full Apex / Protégé product integration or production SLA
- Pricing, equity, exclusivity, or fundraising
- Rebuilding your judgment layer from scratch

4. Success criteria

We call the spike successful if:

- **In a live Meet**, a grounded question receives a source-bound answer (deck / session).
- **An out-of-scope or ungroundable** question refuses or escalates - no invented answer.
- **Escalations** are visible (log / flag: topic, reason, timestamp) for a human expert to treat as ground truth later.

5. Contribution model

Expert Scale	Overtone
Escalation rules + when “needs expert” is correct	Meet / Zoom / Teams join + presenter AV + voice relay
Optional sample specialty scope (e.g. GTM-only) for the test	Indexed deck / session grounding + tool calls
One short review call after you try Launch	Spike build + honest latency / failure notes

6. Suggested next steps

- **Try Launch** on the dashboard with your own Meet link (feedback welcome).
- **Lock a 30-minute working session** to align escalate-stub fields with your handoff model today.
- **After one clean end-to-end run**, decide commercial shape (integration / ongoing collab) — or stop cleanly.
